

Abstract

In a shaver 1 having provided on an upper end portion of a main body 2 thereof a head portion 3 comprising a razor 6 having an outer blade 4 and an inner blade 5, a front cross section of the shaver 1 has a shape narrowed at a substantially center portion in its up and down direction, and a side cross section of the shaver 1 has a substantially S-shape, in order to increase the contact area between the main body 2 and the palm, to improve fit feeling, to make it hard to slip, and to finely adjust the angle of the razor against the skin without moving the wrist.
